**Alguna vez ha tenido envidia tablet? Te mostramos cómo dar vuelta a su computadora vieja confianza en una tableta de estado-of-the-art!**

# TABLIFIER

THE ULTIMATE DESKTOP TO TABLET DIY KIT FOR SUPER MODDERS, HACKERS AND TECHIES

At ReviverSoft, we help you to make your old computer run like new again. Unfortunately, many of you think you are now too cool for a computer and instead want a tablet. Well, you know what? Using The Tablifier, you can now turn your trusty old PC into a tablet! So stop lining up outside silver stores ... create you own tablet today!

Before modifying your computer, it is always a good idea to back up all your files. Use several CD-ROMs or memory sticks to categorize your files alpha-numerically, i.e. Cat Poster Captions, Carpenters Love Songs, etc.

Security is important, especially with mobile computing. So before you begin, make sure you have backed up all your files, programs and screen savers to an external hard drive. Also, tell all of your Facebook friends that you may not be online for a while after following these instructions.

It is generally a good idea to unplug your computer and all components before you bust things open and grasp all the wires like a fistful of spaghetti.

## MATERIALS

DUCT TAPE

GARBAGE TIES

SOME OLD BELTS AND SUSPENDERS

BACKPACK

A large backpack used in hiking, or at a base camp on Mt. Everest. Messenger bags, fanny packs, duffel bags, hydration packs, satchels, sling bags, reusable grocery bags, etc. can also be used along with the backpack for your peripherals, but the modified tower must fit into a sturdy backpack. You can also use a rolling backpack, if you want to look dumb.

FINGERLESS GLOVE

BREAKING, SMASHING, PRYING AND CUTTING TOOLS (WHATEVER IS LYING AROUND)

VELCRO

## STEP ONE

CONVERTING YOUR LCD SCREEN INTO A TOUCH SCREEN

- Using your breaking-smashing-prying-cutting tool, remove your LCD screen from its base so that it can lay flat on the ground.
- Purchase one of those "change LCD screen into touchscreen" things off the internet.
- Install it and, voila, your tablet is coming together!

## STEP TWO

MOBILIZING YOUR TOWER

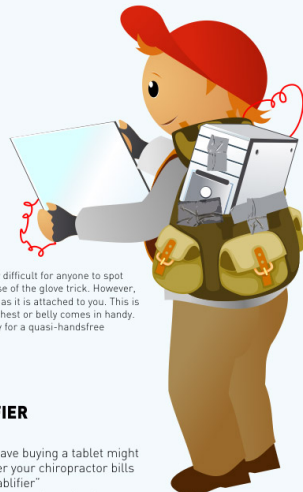

- Pick up your computer tower
- Put it in the backpack
- Adjustments may be needed using the old belts, suspenders, duct tape and garbage ties.

**NOTE:** Don't forget that you will need to remove the backpack at some point, whether it's at night or to use the bathroom, so don't tape it permanently to your person.

## STEP THREE

GETTING READY TO ROLL

- After you have secured the backpack with your tower inside, feed the wire to your monitor through your neck hole in your shirt and down the inside of your sleeve.
- Pull the wire through of the finger holes in your fingerless glove and plug it into the monitor.
- This is quite a deceiving trick. It will be very difficult for anyone to spot that your "tablet" is actually "wired" because of the glove trick. However, you will not be able to put your tablet down as it is attached to you. This is when a large piece of Velcro sewn to your chest or belly comes in handy. You can just secure your tablet to your body for a quasi-handsfree experience.

## PRAISE FOR THE TABLIFIER

"Never has DIY been so thoroughly disastrous. If you listen to these people, you need your head examined."

- Lifewacker

"The money you save buying a tablet might be enough to cover your chiropractor bills after using The Tablifier."

- www.tonyshardware.com
